2000% returns in crypto? Iâ??ll never invest in a coin like this!

Description

Is a 2000% gain possible within a day?

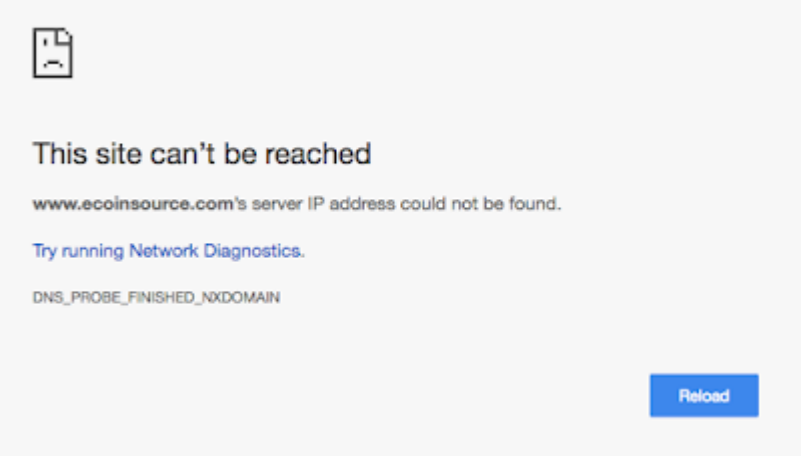

But do you dare buy into this coin? Take a look at its low volume, the number of grammatical mistakes on its Twitter page, the bold claims it makes, as well as this piece of ~~art~~ created using Paint X.

Source: E-coin Twitter

Its website is not even accessible. Whatâ??s happening?

This looks like a ~~shitcoin~~ through and through to me. Would you dare to buy?
Not for me! The sudden price increase looks more like a pump-and-dump attempt to me, because at such low volumes, it is easy for PnD groups to manipulate the price.
What about todayâ??s crash, BB? Has the crypto bubble burst?
Well, you can carry on thinking it is over while the rest of us scoop up all the good coins that have gone on sale ð???
P.S. Iâ??ll be talking about cryptocurrencies tomorrow on a discussion hosted by Value Invest Asia if youâ??ll like to tune in (Facebook Live). RSVP here!
With love,
Budget Babe
