

Are the DBS digiPortfolio latest offerings worth investing in?

Description

When DBS launched digiPortfolio in 2019, it shook up the entire market for its low starting capital and management fees (which was almost unheard of among banks at that time). By now, we already know [why DBS digiPortfolio is one of the best options for retail investors](#), and now, there are 2 new portfolios added for us to choose from – SaveUp and Income.

Are these portfolios any good, and how do they stack up against the current other options in the market? Here's what you need to know before you decide whether to put your money in.

[Back in 2019, I said this about DBS' digiPortfolio](#) offering:

"The DBS digiPortfolio...makes a lot of sense for investors who don't have time to actively research and manage their portfolios, as well as those who have always wanted to invest but stayed out of the markets because they've no clue on how to construct their own well-diversified and balanced portfolio.

*Even for DIY investors, for those looking to diversify and add to the index component of your portfolio, this might just be **a more cost-effective and productive way** to do so. It certainly saves you from all the time and extra fees incurred each time you manually rebalance your portfolio."*

That was when they only had 2 portfolios (Asia and Global) for us to choose from. Today, the pie has since expanded:

SaveUp
If you're looking for a more stable way to grow your spare cash.

Income
If you're seeking a regular payout.

Asia
If you prefer regional exposure.

Global
If you're willing to take global exposure.

With the recent macro uncertainty, it isn't surprising that DBS has introduced alternative portfolios for investors who are rethinking their appetite for risk, especially in the light of market performance since the pandemic.

I'll review SaveUp and Income below, to help guide you towards deciding which is more appropriate for your needs.

SaveUp – a portfolio of mostly fixed income instruments

SaveUp Portfolio
Unit Trust

\$100 to start
SGD

What is it:

- Conservative fixed income only portfolio
- 3 - 6 unit trusts, investing primarily in fixed income instruments
- 0.25% p.a. flat management fee

For investors who:

- Have a lower risk appetite and prefer returns to be less volatile
- Are looking to invest to generate higher returns compared to regular cash deposit rates

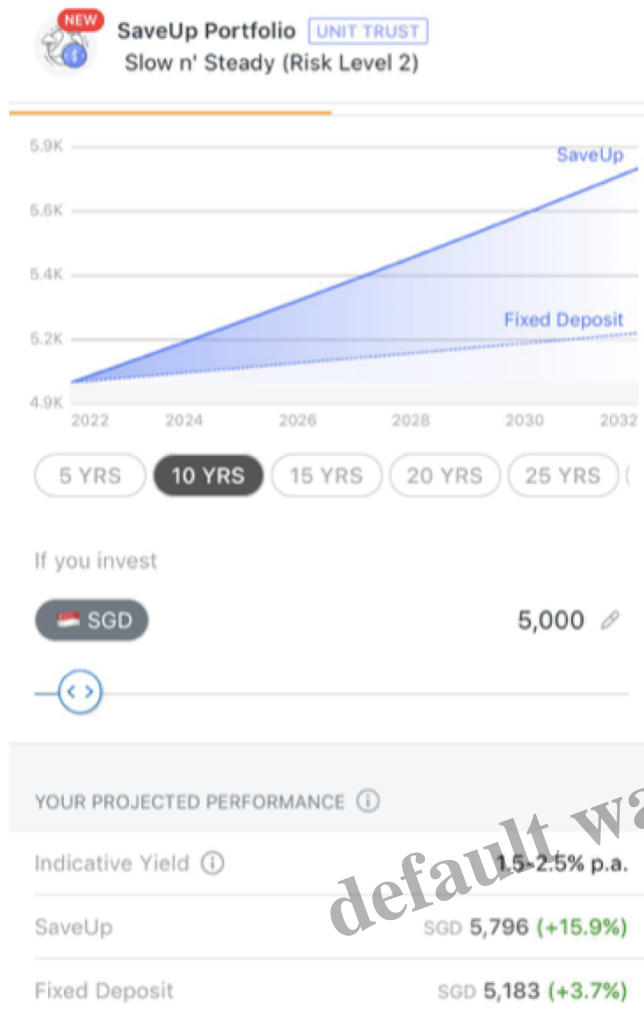

If you're generally quite risk-averse and have been periodically rotating your money between fixed deposits and government treasury bills, then SaveUp would likely interest you more.

(also read: [Is it worth investing in Singapore T-bills now?](#))

This is a risk level 2 portfolio, which invests primarily in fixed-income instruments to provide stability to the portfolio. The portfolio is managed to an investment grade average and a duration of less than 3 years. [Hide](#)

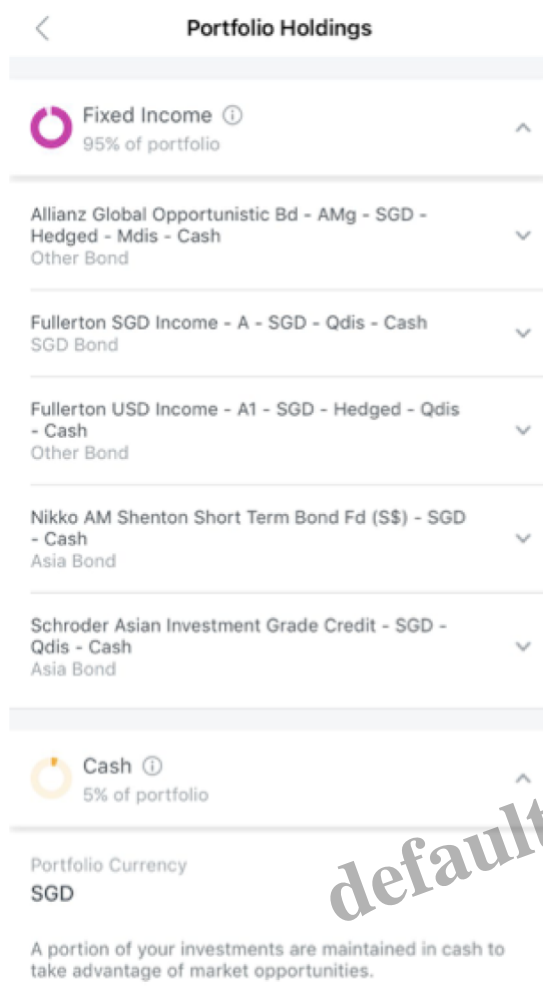

Comprising of 95% fixed income instruments, its long-term yield is projected to be about 1.5% – 2.5% p.a., but is currently yielding closer to 4% due to the higher interest rates environment that we are now in.

This is a projection (taken from the app) of how SaveUp is expected to perform as compared to investing the same amount in fixed deposits. The base rate shown on the graph is the 12-month SGD Fixed Deposit average over the last 10 years, and sourced from MAS.

If you didn't already know, prior to this year, interest rates have been muted for many years.

You can also view the portfolio holdings and the rationale when you click on it in your DBS app:

How does SaveUp compare against other options now?

If you're looking at SaveUp, then your other comparable options would be fixed deposits, the Singapore Savings Bonds (SSBs), treasury bills and cash management portfolios offered by the other robos or brokerages.

Let's compare against the cash management solutions offered by other robos / platforms first – if you zoom in carefully into the investment breakdown, you'll realize that most of them allocate to 2 – 3 funds in equal (or almost static) weightage. On the other hand, SaveUp allocates into 5.

But is more the better?

Remember, digiPortfolio has had a unique proposition since Day 1, which is for retail investors to be able to access a portfolio constructed with views from the DBS CIO office. In this case, SaveUp's portfolio at launch already reflects this, with the 5 funds being of the following different profiles:

- Defensive global bond
- Asian short duration
- Asia investment-grade bonds

If you resonate with that, then you'll probably like digiPortfolio's offering better.

As for the bonds and treasury bills, in terms of yields, the rates differ each time based on *when* you're doing the comparison. *For instance, T-bills were yielding less than 1% for the last 3 years until things changed earlier this year. As for fixed deposits, you'll need to lock your money in for at least 1 – 2 years if you're aiming to get anything more than 2% p.a.*

So if you're someone who is constantly monitoring the market and actively rotating your money around the best-yielding option at any one given point, then there's a chance that you can still beat the rates on SaveUp, even though it requires more of your time and energy.

But if you're someone who just wants:

- A low minimum capital (\$100),
- No lock-up period,
- Yields higher than what you can earn on your savings accounts,
- Without much work needed on your part,

then in this case, SaveUp would be a good option.

Income – seek regular payouts of 4% p.a.

NEW **Income Portfolio**
Unit Trust

\$1,000 to start
SGD or USD

What is it:

- A portfolio that generates regular income
- Equity and bond unit trusts
- 0.75% p.a. flat management fee

For investors who:

- Seek regular quarterly payouts of 4% p.a. from investments
- Prefer a portfolio consisting of familiar sectors such as REITs, Asian equities and bonds

What if you wanted returns higher than what SaveUp could potentially offer?

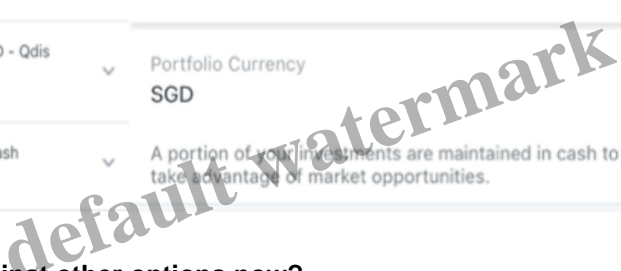

In that case, start looking beyond just fixed income instruments and dial up your equities exposure as well. In this case, the Income portfolio might be a more appropriate pick:

With a 55% equities exposure, this portfolio will be taking on more risk than SaveUp, but is still less volatile than most portfolios that come with higher equity allocations.

Tap to view the portfolio holdings, which will reveal exposure to mostly high-quality bonds (both global and Asia), dividend stocks, REITs and other blue-chip companies that generally have a history of paying stable dividends:

How does Income compare against other options now?

If you're looking at Income, then your closest comparable options would be the low to medium risk portfolios offered on other banks or robo-advisory platforms.

Among the banks, DBS definitely has the lowest fees right now:

Provider	Rates (p.a.)	Minimum investment
DBS digiPortfolio	0.75%	S\$1,000
OCBC RoboInvest	0.88%	US\$100
UOBAM Robo-Invest	0.8%	S\$500

What's more, your investment in digiPortfolio also qualifies for higher bonus interest on your Multiplier account, so you'll end up killing two birds with one stone.

What's stopping me from DIY?

Nothing.

DBS digiPortfolio was *never* meant to be a complete replacement; and from a cost perspective, DIY almost always wins.

But when you calculate your costs based on the time and energy needed to research, execute, monitor and rebalance your portfolio periodically...then the digiPortfolio becomes a no-brainer, especially when you're paying for fees this low.

Conclusion

Perhaps you're one of those who started looking into digiPortfolio because you're trying to maximise the bonus interest earned on your Multiplier savings account.

Or perhaps you were among the many who started investing during the pandemic – only to realise you weren't as skilled as you thought you would be – and you're now looking to move your investments to a robo-advisory instead.

Whatever your reason, there's no doubt that digiPortfolio can help, especially now that it has been enhanced to offer 4 ready-made portfolios built and managed by the DBS investment team for you. I like how DBS has moved along with the times and introduced SaveUp and Income now, especially in an era where more investors who went in big during the pandemic are now starting to realise that they took on too much risk than what they bargained for.

I hope this article helps you to better understand what SaveUp and Income offer, and how to read the portfolio allocations accordingly. [If you're considering the Asia or Global portfolio instead, check out my previous review here.](#)

For a hassle-free investment experience, all you need to do is to choose which portfolio suits your needs better, set the amount and frequency at which you'll like to invest, submit, and you're done!

One small fee. For expert management

We removed all sales charges, platform fees and switching one small, flat management fee of 0.25% - 0.75% p.a. for the efforts to curate and manage the portfolios.

0.25% - 0.75%
per annum
Management fee

Based on portfolio value.

Portfolio Type	SaveUp (0.25% p.a.)	Income (0.75% p.a.)	As (0.75%
Portfolio Value	S\$100	S\$/US\$1,000	S\$1,
Management Fee	S\$0.25 a year	S\$/US\$7.50 a year	S\$7 a ye
