

If You're Poor, It's Your Own Fault!

Description

Recently I had an argument with a good friend about how she hardly listens or give credit to my suggestions, until someone else (whom she trusts more, and who is a self-made millionaire) says the exact same thing.

My personal mantra is to always give every idea a chance. Because if you do what my friend does, by listening to the “experts”:

The infographic features a dark, torn-paper-style top border with the text "your logical fallacy is" in white. Below this, a bright sunburst effect is centered behind a black crown icon. The background is a light blue sky with white clouds. A diagonal watermark reading "default gemärk" is visible across the center. Below the crown, the text "appeal to authority" is written in a large, bold, black font. Underneath, a smaller black font reads: "You said that because an authority thinks something, it must therefore be true." A paragraph of smaller text explains that while appeals to authority are not valid arguments, it's not reasonable to disregard experts with demonstrated knowledge. It concludes that the authority's opinion does not have an intrinsic bearing on whether their claims are true or not. At the bottom, a paragraph credits a source and notes that this concept is taught in GP tuition sessions, highlighting that many people do not understand its importance or how to apply it in life.

your logical fallacy is

appeal to authority

You said that because an authority thinks something, it must therefore be true.

It's important to note that this fallacy should not be used to dismiss the claims of experts, or scientific consensus. Appeals to authority are not valid arguments, but nor is it reasonable to disregard the claims of experts who have a demonstrated depth of knowledge unless one has a similar level of understanding and/or access to empirical evidence. However it is, entirely possible that the opinion of a person or institution of authority is wrong; therefore the authority that such a person or institution holds does not have any intrinsic bearing upon whether their claims are true or not.

Credits [here](#). Coincidentally, this is also what I teach my kids during our GP tuition sessions. Unfortunately not enough people understand the sheer importance of this concept (fallacies in general), and even fewer people understand how to apply it effectively in life.

Since young, I've learnt to avoid saying "I told you so" (if you're wondering why, read [this](#)) so I didn't say it despite the fact that I've been proven right on multiple, multiple occasions, such as:

- (i) Lesson #1: Most Singaporeans tend to think cheap = lousy quality. Tested and proven right. Like cafes vs. hawker centres.
- (ii) Lesson #2: Consumers will always buy the better-packaged / better-advertised product with lousier contents because most people will always fall victim to **marketing**.

(iii) Lesson #3: GP is more important a subject than you think it is.

Told my sister during her J2 years that she had better pull up her GP to at least a B or risk not getting into her university choice courses at all. She retorted that GP is a “H1 subject” and used that to reason why it wasn’t important. In the end? My predictions happened, despite the fact that she scored quite a number of ‘A’s at the national exams. Her ‘D’ for GP costed her the better university courses that she wanted. But I kept quiet from commenting.

Anyway, I’m going off-track. Back to the reason why I’m here.

A few days ago, I met a taxi driver who inspired me to write this post. At the risk of sounding heartless and unsympathetic, I’ll use some **authorities** so you’ll believe them instead (because why should you listen to Budget Babe, right? She’s not even an “authority”, unless you think my straight-As / getting promoted from Junior Executive to Manager within a year / saving \$20,000 in a year qualifies me as an “authority”).

At first glance, there’s nothing remotely special about the taxi driver I met. But after chatting with him, that’s where I uncovered the gold.

This guy has **only GCE ‘N’ levels**, but **earns \$7,000 a month**.

That’s more than what I earn every month, and I’m a university scholar graduate! Tells you something about the paper chase, doesn’t it.

Of course, I didn’t just take his word for it, so I asked him how he achieved that. His success formula is not impossible to replicate:

- He drives 12 hours every day, including weekends
- He drives when taxi drivers are taking their breaks
- He uses a taxi-booking app to help him get more customers and reduce his waiting time plying the roads for customers

But given if it were you, would you be willing to work 12 hours x 7 days without rest? How long would it take before you burn out? The truth is, I'm not sure I could either, unless I'm desperately broke.

I quote Alibaba's CEO, Jack Ma, on the reasons why he believe people lose out in life:

1. Being myopic to opportunity

There will *always* be opportunities to make money.

I repeat, there will *always* be money-making opportunities around you. All you need to do is open your eyes, and take advantage of them.

For instance, that taxi driver I met? In my short cab journey with him, he tried to convince me to join his friend as a financial advisor. He also dangled an enticing carrot: if I let him refer me to his friend, he would get a \$300 referral fee, and he would give me \$100. I would get a great career with more money-making opportunities, and an additional \$100 in my pocket!

I asked why he didn't just go become a financial advisor himself if he believed it was such a good money-making job. He admitted that with his poor academic qualifications, he couldn't make the cut.

But instead of giving up, he found another opportunity around this opportunity.

2. Looking down on opportunities

The reason why most of us are myopic to opportunities is because *we don't know how to recognize them*.

And we also often *don't give opportunities enough credit*.

Just imagine – a taxi driver charts an average of 15 passengers a day. If he tried the same sales pitch on everyone, and even with just a miserable 1% hit rate, that's 5 passengers a month to refer = \$500 extra in his pocket!

3. Lacking understanding

In order to be good at something, you first need to understand it.

There's no need to strive for 100% comprehension either, but at least aim for 70%. That should provide a sufficient margin of safety.

4. Failure to act quickly enough

Opportunities don't wait around forever. If you don't snap it up, then someone else will.

Remember that historical moment in 2008 when AIG's stock price plunged to a low of \$1.25 on September 16? You only had a few hours to catch it before it climbed up to the next day's high of \$3.10. (You could have made back 3x of your money overnight if you reacted quickly enough and were willing to take the risk.)

If you don't believe Budget Babe that's fine. But this Jack Ma guy is worth \$25 billion today, so you better believe him ok.

What set this taxi driver apart was that he looked for opportunities + was hardworking with no complaints. In the time his passengers sit in his cab, he would try to casually convince them to go for a financial advisor job so he can get \$300 if they agree.

Honestly, how many of us will think about that?

Sometimes if opportunities don't appear in front of you, CREATE them.

I wasn't born smart, but I worked my own way to becoming a scholar, something I never dreamed was possible. I wasn't born rich either, nor did I land a high-paying job upon graduation (\$2,500 starting pay for a scholar too). But instead of complaining, I worked hard to save \$20,000 in a year which allows me to start properly investing now in my mid-20s when most people will be more concerned about living a happening social life. I'm confident that by working hard, I will reach financial freedom one day, and sooner than most of my peers.

With that, I hope this sharing has inspired you as much as the taxi driver has inspired me.

With love,
Budget Babe
