

178% gains in a month while the crypto markets crashed

Description

Crypto markets are crashing, but [click here and watch this video](#) carefully:

Notice how there's only ONE coin in the top 100 cryptocurrencies which is green? Yup, that's mine. In fact, in between taking that video and writing this post, DGD has gone up from 25% to 40% 100% now.

How much did I make on this trade? For sake of simplicity, let's just assume I bought 5 DGD coins.

Then:

- 1 eth = USD 660 (my buy price)
- 1 DGD = 0.2 eth
- Cost for 5 DGD = USD 660

Today:

- 1 DGD = 0.4 eth (it even went up to 0.7 eth for a short period of time but I didn't catch it)
- 1 eth = USD 920
- Total for 5 DGD = 2 eth = USD 1,840

That's a **178% gain** in just 2 months.

But you know what? I'm not going to cash out. In fact, I'm reinvesting it back into the crypto markets. Call me crazy if you will, but I'm buying the dip.

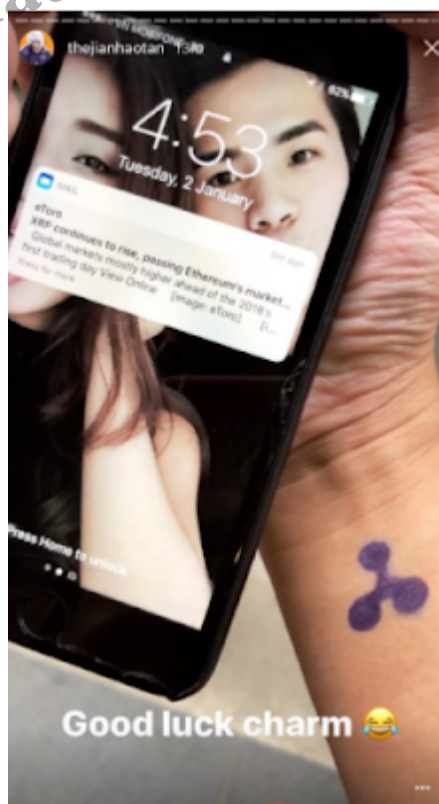

The entire market is bleeding but my portfolio is still green (thank god!). I would attribute it to both luck and skill – by not buying shitcoins (like Ripple *cough* read my take on XRP [here](#) and [here](#)).

Ouch.

Those who bought on 4 Jan 2018 and held till now:

	4-Jan-2018	2-Feb-2018	Gain / Loss
DGD	USD 170	USD 350	+105%
XRP	USD 2.20	USD 0.78	-65%

Still think crypto is purely speculation or...luck?

P.S. This is not financial advice. In fact, I wouldn't buy DGD now since I sold today thinking it was

overvalued. The ship has sailed, now onto the next coin!

With love,
Budget Babe
